QUALITY

Motorola's goal of acceptable quality is at Six Sigma or no more than 3.4 defects per million opportunities. Motorola Lighting Inc. designed its electronic ballast to meet the most rigorous performance standards at world class levels. This translates into a highly robust product that goes through extensive environmental stress testing to assure our customers of very low initial defect levels (less than 0.1%) and high reliability (greater than 500,000 hours Mean Time to Failure—MTTF).

The economic ballast life is 20 years when operated at 45°C ambient temperature. Operation of MLI's ballast at 50°C may derate life expectancy by 25%.

Six Sigma Quality means "world class" in all that we do at Motorola Lighting Inc., which is part of our commitment to TOTAL CUSTOMER SATISFACTION.

**SILVERLUX™
REFLECTORS
CUT YOUR
LIGHTING ENERGY
COSTS IN HALF.**

The energy-saving outlook is bright.

Shwerlux reflectors let you remove as many as four fluorescent lamps, while maintaining optimum lighting levels and a 144-lamped box. And when you cut the number of fluorescent lamps in half, you can also cut your energy costs in half.

Or Shwerlux reflectors can actually deliver more light out of the same lamps—improving lighting levels dramatically—without increasing energy lamp or ballast costs.

The payback—short, usually less than two years.

Direct savings in the form of lower lighting energy costs pay off quickly. Additional indirect savings such as lower lamps and ballasts, lower maintenance costs, and lower air conditioning costs can accelerate payback even more.

Reflectivity and efficiency—the highest available.

After determining your actual lighting requirements, 3M computer-aided design software is used to design engineer your reflectors for highest performance.

Part of that performance stems from a unique silver film made by 3M that has 95% specular reflectance—the highest reflectivity on the market. This film is first laminated to specially pre-tested metal substrate, then coated with proven 3M adhesives. This adhesive process provides a strong film-to-substrate bonding, uniform appearance and exceptional performance year after year.

Reflectivity and efficiency—the highest available.

After determining your actual lighting requirements, 3M computer-aided design software is used to design engineer your reflectors for highest performance.

Part of that performance stems from a unique silver film made by 3M that has 95% specular reflectance—the highest reflectivity on the market. This film is first laminated to specially pre-tested metal substrate, then coated with proven 3M adhesives. This adhesive process provides a strong film-to-substrate bonding, uniform appearance and exceptional performance year after year.

Reflector Surface	Specular Reflectivity	Total Reflectivity
3M Specular Fluorescent Reflector	95%	90%
Acrylic-type "not fluorescent" reflectors	60% - 85%	70% - 80%
White	5%	60% - 80%

The higher the reflectivity, the greater the light delivery. The more light reflected into the work space, the more efficient the lighting system. And maximum efficiency means lower costs.

In short, the Shwerlux reflector design and construction, coupled with our silver film and proven adhesives, make our reflectors the most efficient lighting system.

Front reflectivity maximizes lighting even more.

Our patented front reflective surface construction allows light to be reflected more directly from the surface of the reflector for greatest lighting efficiency.

What's more, a special non-yellowing acrylic coating protects the film from degradation due to ultraviolet light. A second similar coating prevents the silver from oxidizing or corroding. Result? Maximum performance over a longer life.

Shwerlux reflectors are easy to install and maintain.

Lamps can be removed and fixtures relit with no rewiring.

All fluorescent reflectors become dry over time. Yet tests indicate that even without cleaning, Shwerlux reflectors lose less than 3% of their reflectivity over a four-year period in normal office environments. Superior reflectivity can be maintained simply by cleaning reflectors with a mist of 2% liquid detergent in warm water and wiping with a soft cloth or sponge. After cleaning, reflectors return to 99% of their original reflectivity.

We'll even help finance your program.

Minnesota—a division of 3M—provides financing for customers who invest in 3M products such as Shwerlux reflectors. Because Minnesota's primary function is to make it easier for customers to buy 3M products, financing rates are kept as low as possible.

EXAMPLE ONLY

Installed Value: 1717 reflectors @ \$53/unit installed = \$250,000

Minnesota Financing

Amount financed: \$250,000

Term of agreement: 36 months

Monthly payment: \$8,110

Monthly energy savings: \$9,639

Net monthly savings: \$1,529

Lease-purchase plans are available at fixed monthly charges, for periods ranging from one to three years. In each, you're using your energy savings to pay for the installation.

Just as important, your entire purchase—Shwerlux reflectors, installation and financing—can be handled by one person. Your 3M representative.

*Note: Based on the above rate. Savings depend on your actual operation, usage and power rates.

SILVERLUX FLUORESCENT REFLECTORS

- Cut energy costs in half or enhance lighting levels
- Pay for themselves in two years or less

3M is a part of the Green Lights Program—a voluntary, non-regulatory program organized by the Environmental Protection Agency (EPA). This program encourages corporations to take advantage of new lighting technologies and design principles that benefit the environment. 3M is a unique member of the program because it participates as both a consumer of electrical lighting energy and as a developer of electrical lighting products. Silverlux reflectors demonstrate 3M's commitment to energy-efficient lighting technologies that reduce energy consumption and pollution while delivering the same or better lighting.

Cut costs, not lighting.

CEILINGWAY Low Profile

A classic ceiling fixture with clean, angular lines designed to blend in with a wide variety of architectural styles. The high light output and close profile make it an excellent choice for bathrooms, kitchens and corridors.

OPTIONS AVAILABLE

- Cold weather or 277v ballast
- Rapid start ballast for 22 watt
- White polycarbonate diffuser
- Black trim
- Custom color finish
- Emergency Ballast - extended pan req'd
- Tamper proof screws (tool available)

STANDARD FEATURES

- **Construction** Heavy gauge steel
- **Pan** White polyester powder coated
- **Diffuser** White, non-yellowing acrylic
- **Ballast** Rapid start on 32 & 54 watt
- **UL Listed** Damp location
- Mounting hardware & lamp(s)

Evenlite LED Exit Lights

EV SERIES

The LED of the 21st Century

No Ifs, Ands or Buts.

This is exactly how the EVENLITE 2000 appears! Perfectly even illumination is produced by indirect lighting, so that the LED's are invisible, with no hot spots. All this is provided in the slimmest sign on the market with integral charger and battery.

No competitor comes close to these combined specifications:

- Less than 3 watts total power per face
- Perfect light distribution across face
- Single face only 1 5/8 " thick
- Double face only 2 1/8" thick
- Remote unit only 1/2" thick
- Multiple LED lamps with 20 year unconditional guarantee
- NICAD batteries with 5 year guarantee
- Aluminum housing for light weight and strength
- Universal mount
- Baked enamel, vinyl clad or satin anodized finishes
- Polycarbonate faceplate

Cost inflation factor (7)	160	389	0
<u>TOTAL COSTS AFTER 10 YRS:</u>	<u>\$932</u>	<u>\$1,937</u>	<u>\$</u>

TO COMPARE COSTS, INSERT YOUR QUOTE FOR SHIELD SIGNS IN COLUMN 3.

Based on above and assuming SHIELD sign average cost is \$200 installed, if you now have 50 Exit signs operating with 25w lamps over 10 years, and we include the cost of a new SHIELD sign in 1998 at \$256 installed (inflation at 2.5% per yr) YOU COULD SAVE \$96,394! Even with current "power and labor saving" exits with PL7 lamps, savings will be \$46,144!

NOTES:

- (1) Average 1987 Fixture costs: Electrical contractor labor at \$30/hr: Material includes typical pipe, wire, & circuit breaker: If new load center needed, add to material costs.
- (2A) Two 7 watt PL7 lamps/sign, 24 hrs/day at \$0.10/kwh.
- (2B) Two 25w lamps/sign, 24 hrs/day at \$.10/kwh.
- (3A) 10,000 hr lamps, 9 changes of 2 lamps/sign, lamp at \$8.00 ea.
- (3B) 750 hr lamps, 115 changes of 2 lamps/sign, lamp at \$.50 ea.
- (4) Lamp replacement, 15 min/sign, labor \$10.00/hr.
- (5) Battery costs estimated for a change every 2½ years per sign or 4 changes at a cost of \$55.00/unit. The cost per battery will vary as to type of battery installed. This estimate also assumes no failure of charger or transfer circuits.
- (6) Battery maintenance and replacement per (7) above, 4 changes per sign, 1 hr/sign, labor at \$10.00/hr.
- (7) Inflation 2.5% per year applied to operating and maintenance costs for electric signs after installation.
